

Five Year Capital Outlay Master Plan

Southwestern Michigan College

October 2025

Executive Summary: Southwestern Michigan College (SMC) was founded in 1964, and opened its doors in 1966. Since that time, the College has developed a main campus with a replacement value of approximately \$175 million, and an extension site (including an M-Tec Center) of over \$15 million. Overall, the physical plant of the College has been maintained in good repair. Classrooms, academic support facilities, and infrastructure have been systematically renovated as funds have been budgeted. SMC currently faces the challenge of maintaining its facilities and grounds to the very high level required to meet the demands of its students and to continue to meet its core mission of student success. We have a commitment to improving the appearance and functionality of our buildings in order to positively influence the educational experience of our students. Based on the 10-year facilities master plan conducted in 2013 by Arkos Design, it was to cost approximately \$21.3 million to complete a campus-wide renovation of our buildings, selectively expand them, and upgrade their infrastructure. We have completed most of these renovations, leaving only one major building project yet to accomplish from the original plan. We are currently in discussions with another firm to commission a revised campus Master Plan to be completed in the upcoming year.

Included in the projected improvements of the previous master plan was the renovation of three major academic buildings which was accomplished with State assistance. These projects enhanced the College's capacity to provide students with quality instruction particularly in the science, nursing, and health education fields. The projects provided infrastructure improvements to these classroom buildings to make them more energy efficient, transforming them from the least energy efficient buildings on campus to the most, and following the LEED guidelines. Nearly every student on campus has classes in at least one of these renovated buildings at some point in their time with us, so it is imperative that the learning environment be optimal.

With the completion of the above projects, the remaining priority for Southwestern Michigan College for future renovation, per our facilities master plan which was updated in December 2019, is the renovation of the primary learning areas (academic core) in the Dale A. Lyons Building on the College's Dowagiac campus. This building was constructed in 1978 and is now over 45 years old. This is the home to many of the College's Associates in Arts offerings, and it is in need of significant renovation. This building includes our theater, band and choir practice rooms, art labs and gallery, and a significant number of classrooms. The building is the most commonly visited building on our campus. Area school events such as art, band, and music competitions are held in the facility as a community service at no charge. All of the College Visual and Performing Arts productions are held in the theater and are well attended by community members. We generally do not charge for these productions and only accept donations, which are given to the student music and theater clubs. The building houses almost all of our external speaker events, often in partnership with the high schools, law enforcement partners, the Pokagon Band of Potawatomi Indians, and local Veterans groups. Improvements made to this building will be quickly noticed and appreciated by our very supportive surrounding communities. Of course, any improvements to a 45-year-old building will provide immediate instructional, as well as operational, efficiencies.

As this project is a priority of the College, more detailed instructional needs and cost estimates have been obtained regarding renovation costs over the years. We now plan to take a phased approach with the renovation of the Lyons Building, similar to what we have

done with our Niles Area Campus renovations over the last several years. Phase One of the Lyons renovation project (to be completed in summer 2026) has a projected cost of \$2.0 million and will include a renovation of the choir room, Phase Two (to be completed in summer 2027) has a projected cost of \$2.6 million and will include a renovation of the band rooms and Phase Three (to be completed in summer 2028) has a projected cost of \$1.7 million will include an update to the bathrooms, main hallway and theatre entryway. Future phases will address other classroom needs as well as the HVAC and mechanical systems.

The other top priority for the College is the addition of Wrestling Room onto the Charles O. Zollar Building which houses our Student Activity Center and our Gymnasium. This project is necessary to meet the needs of our expanding men's wrestling team and the addition of a women's wrestling team this academic year. The project began construction in the summer of 2025 and is expected to be completed in February 2026 for an anticipated cost of \$5.0 million. It will include, a 11,000 square foot addition with a wrestling room, offices, restrooms and athlete changing rooms. The College's current wrestling room is located in the Dale Lyons Building. This project will relocate the wrestling room to the Zollar Building which houses the rest of the athletic facilities on campus and will free up space in the Lyons Building that will be converted into the choir room as part Phase One of the Lyons Building renovation.

We expect to fund both of these projects with a combination of institutional funds and donor funds.

The following information included is in response to the requirements of the Department of Technology, Management, and Budget. Categories of information required are shown in italics, with the College's data following.

Mission Statement

a) Summary description of the overall mission of the institution

The mission of Southwestern Michigan College is to serve our community by providing affordable local access to high quality postsecondary career preparation and college education including the total college life experience. The recent strategic plan identified the following conditions necessary for success of our mission. They are: purposeful academic programs; community engagement; enrollment growth; financial stability; student success; operational efficiency; and value human capital. In this plan, every strategic initiative being worked on is aimed toward supporting at least one of the following overall goals of the institution: Organizational Growth; Student Growth; Internal Quality Improvement; and Financial Stability.

Instructional Programming

a) Describe existing academic programs and projected programming changes during the next five years, in so far as academic programs are affected by specific structural considerations (i.e. laboratories, classrooms, current and future distance learning initiatives, etc.)

There are countless programs and services that Southwestern Michigan College might provide to the community that we serve. With finite resources, choices are constantly being made concerning which programs can and should be offered, and which will not. Input from the citizen-owners we serve, occupational advisory committees, local intermediate school districts, enrollment trends, transfer articulation agreements, employment opportunities, industry needs, program costs, and numerous other factors are used to inform the Board of

Trustees in their ultimate decision-making regarding which programs and services will be offered.

During the Summer of 2021, the Higher Learning Commission reaffirmed Southwestern Michigan College's Accreditation for another 10 years, citing especially "excellent physical resources" and "effective and efficient use of financial resources." Overall, HLC's confirmation of our operations, instruction, and planning attests to the quality of educational services we continue to provide to our students. In the Summer of 2025, the HLC completed our Open Pathway Year 4 Assurance Review with no recommended monitoring.

Our existing academic programs can be described using two major categories:

1. Two-year Baccalaureate-oriented (transfer) programs.

Arts and Sciences programs at Southwestern Michigan College are responsible for administering the majority of transfer programming and is composed of the following departments: Physical Education, Social Sciences, Humanities and Communications, Visual and Performing Arts, and Mathematics/Science. Together, these departments offer courses that lead to the Associate in Arts and Associate in Science degrees that are designed to enable students to transfer into four-year programs at other colleges and universities.

The College has seen a renewed interest in the sciences, especially with the College's recently renovated science laboratories and classrooms. The science and math instructors have joined together with the students to start a STEM Club on campus that in just a few years has developed numerous activities and presentation opportunities for our math and science students, as well as for students in the secondary schools in our district.

Also, the College has a dynamic Visual and Performing Arts program. These programs not only serve the students who have an interest in visual and performing arts but they also serve as a cultural resource to the community. All of the performances of this department are well attended by community members. The Lyons Building, which houses these programs as well as the College's 350 seat theater, is in desperate need of renovation. The building is over 45 years old and needs both structural and cosmetic updating in order to attract, retain, develop, and graduate more students.

2. One- and two-year occupational programs including workforce retraining.

Business programs at Southwestern Michigan College provide coursework and degree programs in virtually every area of business, including computer information systems. SMC's business and computer information programs offer semester length specific courses for occupational use, one-year certificates, and Associate degrees. Students desiring a two-year degree that prepares them immediately for employment in business careers will choose the Associate in Applied Science degrees. Students who desire to complete four-year business degrees will choose the Associate in Arts option.

To accommodate these programs the College completely renovated the Wood Building in 2007 and converted it from an advanced technology building to a state-of-the-art Information Technology (IT) Building that now houses our Business and IT programs. We have continued to make classroom upgrades using internal funds to stay current with technology training and interests in these fields. These upgrades include the recent transformation of one room into an Esports facility in which our Esports Club team competes with other colleges in this newly popular sport amongst our incoming students.

Nursing and Health Services programs at Southwestern Michigan College provide its graduates with the knowledge and skills required to provide individualized quality health care in their specialty area. The School of Nursing and Health Services offers short-length

specialty certificates, one-year certificates, and two-year Associate in Applied Science degrees in Nursing, and Medical Assistant. All programs in the school meet the guidelines for national or state licensing or certification.

Our health-related programs attract our greatest amount of student interest. Across the nation, these programs are an integral part of current and future educational offerings. It was imperative for SMC to improve the accommodations and learning labs for these degrees in order to maintain and expand our enrollment for these critical career opportunities. Therefore, renovation of this facility was an appreciated and welcomed accomplishment on our campus.

We have started participating in a collaborative consortium (Michigan Workforce Training and Education Collaborative - MWTEC) with other community colleges across the state to offer additional health field programs more efficiently to our students. We have also entered into a Memo of Understanding with a local university, Andrews University, for offering a BSN degree program to our students graduating from our nursing program. We believe the addition of these opportunities for our students broadens their options for careers in the healthcare fields.

Our Nursing Program received reaccreditation by the Accreditation Commission for Education in Nursing (ACEN) in the Spring 2022. Successfully being granted the accreditation from ACEN was a huge accomplishment and one which our program is very worthy of achieving. The renovations of the program building, along with this national accreditation, has allowed us to continue providing a state-of-the-art, highly desired, quality Nursing Program on our campus and has enhanced our ability to continue attracting students into our program.

High Wage. High Skill, High Demand Technology. Southwestern Michigan College prepares its graduates for high-wage, high-skill, high-demand occupations. One and two-year certificates, and two-year Associate of Applied Science degrees are available in six different fields of technology. Technical Advisory Committees composed of people with extensive background and experience in each technical field keep each occupational curriculum up-to-date with current industry standards. To accommodate some of these programs the College has utilized our M-TEC Facility since 2001 which currently houses the College's welding and robotics programs. Due to increased enrollment in the programs, we have invested in upgrades and expansion of the welding labs over the past few years, as well as robotics training equipment, to meet this local need.

Also, the College completely remodeled and expanded the Jan and A.C. Kairis Building in 2010 that houses the College's Automotive Program and Construction Trades program. This renovation and expansion of the building allowed for two additional hoists in the automotive lab and new technology in the classroom including a car in the classroom technology.

Our Construction Trades program continues to prepare students for careers in that industry. Over the past few years there have been a few inter-disciplinary projects in which these students work with students from the Welding program, as well as from the School of Arts and Science and the School of Business. Together students in these programs built an environmentally friendly "small house", a greenhouse, and sets for the performing arts department musicals.

- b) Identify the unique characteristics of each institution's academic mission: Two-year degree and certificated technical/vocational training, workforce development activities, adult education focus, continuing of lifelong educational programming, partnerships with intermediate school districts, community activities; geographic*

service delivery area, articulation agreements or partnerships with four-year institutions, etc.

Southwestern Michigan College is well aware of the need for trained employees in technical areas. SMC's Michigan Technical Education Center (M-TEC) is designed to address the shortage of skilled labor in Michigan. The M-TEC provides creative and proactive solutions to such shortages through its location and design. The Center, located on SMC's Niles Area Campus, is centrally located to southwestern Michigan manufacturers with a transportation infrastructure that allows for quick and easy access to the Center.

Southwestern Michigan College's M-TEC currently houses the College's welding and robotics programs. Over the last two decades, the facility had been used by area business and local economic and workforce development agencies for pre-employment and occupational skills training. SMC's M-TEC facility is thriving while other local college's have closed their M-TEC facilities.

Beyond recent articulation agreements, Southwestern Michigan College has a long-standing relationship with Ferris State University under which students may take all of the needed courses leading to a Bachelor of Science degree in Business Administration-Generalist, Business-Professional Track, Accountancy, Computer Information Technology, Human Resource Management, Criminal Justice, and Early Childhood Education. Each of these Ferris B.S. degree programs can be entirely earned on SMC's campus. In total, students can earn seven Bachelor degrees through the partnership. This partnership offers three plus one programs, allowing students to take three years of SMC classes at SMC's lower tuition rate. A partnership was formed with Michigan State University (MSU) during 2015 to offer certificates. There are now students in 2 MSU certificate programs covering the areas of Agricultural Operations and Fruit and Vegetable Crop Management. In fiscal year 2024 we signed new partnership agreements with Grand Valley State University Omni (GVSU) and Andrews University. The new transfer partnership with GVSU makes it easier than ever for SMC students to transfer seamlessly to GVSU after receiving their associate's degree. The partnership's first degree will be a Bachelor of Applied Science in Leadership and Business Fundamentals. This degree will provide further knowledge of accounting, finance, management, marketing, and organizational dynamics while acquiring leadership and team-building skills. The new partnership agreement with Andrews University's allows the College's School of Nursing graduates to continue on to earn their Bachelor of Science in Nursing online through Andrews University.

Again, in recognition of occupational needs, Southwestern Michigan College is a member of the Michigan College of Engineering – Michigan Community College Liaison Committee. This cooperative agreement provides special transfer possibilities with such schools as Michigan Technological University, Western Michigan University, the University of Michigan and Trine University of Angola, Indiana.

Southwestern Michigan College also works in cooperation with the Heritage Southwest Intermediate School District (HSISD), Berrien RESA, the Van Buren Tech Center and the area K-12 School Systems in multiple agreements. Southwestern Michigan College and HSISD have formal grant agreements related to the Career and Technical Education (CTE) areas for the seamless preparation of students from K-12 through the associate degree level. Southwestern Michigan College offers multiple dual enrollment opportunities for area high school students, including occupational training through structured programs called academies. These occupational academies are offered through a collaborative effort with the Heritage Southwest Intermediate School District and involve vocational opportunities with students taking general high school classes supplemented by college vocational work in nursing, technology, and business. The College has also recently partnered with both HSISD and Berrien County RESA to provide various other early middle college opportunities for

local high school students. Southwestern Michigan College is embracing the new reality of the way early middle college is transforming community colleges statewide. We are poised to adapt instruction and scheduling to take advantage of this opportunity while maintaining academic integrity and a commitment to student success.

An additional community partnership commenced in October 2017 when the Tri-County Head Start program brought their local pre-school program to the Dowagiac Campus of Southwestern Michigan College. With financial assistance from both SMC and Tri-County Head Start, unused campus space was transitioned into an attractive, functional classroom that houses a pre-school program that serves about 24 area children. This partnership also provides an "on-site laboratory" for our college students who are studying early childhood education, providing them with a convenient clinical opportunity to observe this program provided by Head Start. We are currently in discussions to expand this partnership at our Niles campus to help address the "childcare desert" that exists in our service area by providing additional services on our campus, again while providing more on-site laboratory space for our students in the Early Childhood Education and Elementary Education programs.

In summary, it is the policy of Southwestern Michigan College to seek partnerships with others to assist all involved in better serving our students.

c) Identify other initiatives which may impact facilities usage.

The largest and most strategic initiative that SMC has undertaken is a complete student life experience which includes residence halls and an expanded Student Activity Center (SAC). The goal of this initiative has been to combine the affordability of a community college education with the other aspects of college life that can positively contribute to student growth and development. The first residence hall and the expanded SAC opened in the fall of 2009 and the second residence hall opened in the fall of 2010. The College constructed a third residence hall which opened in the fall of 2013 to full capacity.

After a few years of less than full capacity we returned to full capacity in Fall 2022. These three residence halls continue to be a significant asset to attracting students to Southwestern Michigan College. In 2025 we expanded residence hall capacity on campus. This project added new rooms and a total of 36 beds to the three existing residence halls on the Dowagiac campus. Expanding capacity was necessary to address growing housing demand. Construction began in the summer of 2024, and 24 rooms opened in January 2025, and the remaining 12 rooms were available for the fall of 2025. This project was self-funded by the College.

Starting in Fall 2021, we brought athletics back to Southwestern Michigan College starting with men's and women's cross-country teams. SMC won numerous NJCAA national championships prior to the cessation of sports on campus back in the 1990's and we are excited about bringing these athletic opportunities back again for our students. The Board of Trustees also approved the return of four additional sports, including women's and men's basketball, men's wrestling, and women's volleyball. SMC started competing in Fall 2022 in these sports. In the fall of 2025 SMC added men's and women's track and field and women's wrestling. The reintroduction of these sports to campus has attracted enrollment both of the athletic team participants and other students. The athletes are required to live in our residence halls, thus ensuring the space will be filled to capacity on an annual basis. For Fall 2025, we again had a waiting list of up to 50 students wanting to live in the residence halls. The return of athletics to campus enhances the full college experience for all of our students. In addition to athletics SMC also has a robust intramural sports program and robust student life activities including a rock-climbing wall.

To meet one of our core values of high quality in all that the College does, SMC determined a need to enhance and expand the current Student Activities Center gymnasium in order to better accommodate these returning team sports. The project cost was approximately \$3.5 Million, and was funded from corporate partner donors and from the College's existing Building and Site Fund. Administration was successful in raising some funds for naming rights and private donations to this project. Construction was completed in August 2022 in time for the new teams to begin practice. The response from the community and the students has been all we had hoped for – enrollment is up, our residence halls are full, and attendance at events is very good.

d) Demonstration of economic development impact to the State (i.e. Technical training centers, etc.)

SMC's Michigan Technical Education Center (M-Tec) was designed to address the shortage of skilled labor in Michigan. The College continues to assess the continuing needs of such in the area and will provide creative and proactive solutions as needed through its location and design. Due to increased demand for our welding programs, SMC has recently increased the number of welding faculty from one to three.

The Center, located on SMC's Niles Area Campus, is centrally located to southwestern Michigan manufacturers with a transportation infrastructure that allows for quick and easy access to the Center.

Southwestern Michigan College expanded the offerings of its welding and robotics programs through a partnership with the Niles High School Career and Technical Education Center. The partnership with the Center allows us to reach students at multiple high schools throughout the area. This additional, early training of local students will have a positive economic impact on our communities by providing more trained, skilled workers for our local employers.

Also, being in an area that has been identified as a "childcare desert", we are looking to partner with the area Head Start program to expand child care offerings in the area through providing space for such programs, as well as convenient and high-quality training to the staff involved in those programs. The increase in these offerings could have a significant impact on employment opportunities in our area, both within the program and by providing more access to child care and early education for employees of our local employers. This increased access would have a very positive impact on economic development in our service area.

Staffing and Enrollment

a.) Description of Full and Part-Time student body composition by Academic program, including how the program is accessed by the Student (i.e. Main or satellite campus instruction, collaboration efforts with other institutions, Internet or distance learning, etc.)

Table 1. Fall Enrollment by Major

Southwestern Michigan College operates a main campus located on 240 acres between Dowagiac and Cassopolis, the two largest centers of population in Cass County. Additionally, the College operates a satellite campus entitled The Niles Campus located on 16 acres in Milton Township of Cass County. This satellite location was selected for two reasons: first, the College had been invited by area K-12 superintendents to fill a void and offer classes in the Niles area beginning in 1971, and second, the largest growth both in population and employment in the College district is occurring in that area. The location also offers easy access for our neighboring communities along the Indiana state border which is only a few miles from the Niles campus. SMC is the only college owned facility in the Niles area.

Southwestern Michigan College responds to its citizen-owners and their requests. This means a number of classes have been offered in area schools. When requested, the College offers classes to meet the needs of students, employers, and employees. Cooperative/collaborative efforts are described in detail in II.b) above.

The College also offers a wide range of hybrid courses in a number of programs. These courses combine classroom instruction with distance learning. This allows the needed support of classroom instruction with the technology of distance learning. We have also

updated a few classrooms on both campuses with virtual classroom technology which now allows us to use a common instructor to teach to students on both campuses at the same time to best accommodate our student population. The College participates in the Michigan Workforce Training & Education Collaborative for two programs which started in Fall 2021 – MRI Tech and EEG Tech – which helps us expand our health services pathways for our students. Medical Assisting was added in 2023. In 2025 SMC added three additional programs in Radiography Technology, Cardiovascular Technology and Surgical Technology. Participation in this initiative also offers a combination of online and classroom learning for our students within these programs.

In addition, the COVID national pandemic accelerated SMC's evolution into fully online versions of distance education. All online faculty have been trained to deliver online courses through the best practices of Quality Matters™, which led to our first completely online-only courses in Fall 2020. This training ensures our faculty are developing and delivering courses online to serve our students with the same quality instruction they have come to expect from SMC. The Higher Learning Commission met in October 2021 and finalized their approval for SMC to offer any program in the online-only format, a recommendation made by the HLC team of reviewers in August 2021. Since then, we have developed three fully online programs.

a) Projected enrollment pattern next five years (includes distance learning components)

Southwestern Michigan College had experienced a continued decline in the non-traditional aged student market. We believe this decline was due to the aging out of the baby boom generation, the number of people over the age of fifty who are dropping out of the job market, the continued minimal creation of manufacturing jobs, and the reduction of government funded programs available to those in our service area. However, we have re-focused our efforts on attracting more adult students with some changes in our program offerings, particularly in our CTE areas such as Nursing/Health Services and Welding. We also have experienced increased enrollment in this student market with the recent establishment a new Reconnect program by the State of Michigan. We have positioned ourselves with programing and recruiting efforts to attract adult students through these programs. With the approval by the Higher Learning Commission to offer online-only programs, in the Fall 2022 we converted our Business AA program, and in Fall 2023 our Psychology AA, and Social Work AAS programs, into online versions that can attract adult students. Additional programs are being reviewed for consideration of this type of offering in the future.

Based on recent data, high school graduating classes have been shrinking in the College's service area over the past 10 years, hitting an all-time low in June 2014. We foresee another trend of moderately decreasing graduating class sizes through the next few years. The College's strategy of providing a full college student life experience with the building of three residence halls, the expansion of the College's Student Activity Center including intramural and club sports programs, and now the return of varsity athletics, has put the College in a position to increase its market share of traditional aged students and June high school graduates, including those students who have a choice of where they want to go to college. We were approved by the National Junior College Athletic Association (NJCAA) to add intercollegiate athletics back to our campus. We were also reinstated to the Michigan Community College Athletic Association (MCCAA), allowing us to renew competitive rivalries with the five other nearby colleges that all currently offer athletics. We have committed scholarship funds to the athletic program and find that it has had a very positive affect on our enrollment. We are one of only a few community colleges in the state to experience enrollment increases the last four years. In Fall '22, we were up 3.3% in headcount from Fall '21, and in Fall '23, we were up 8.1% over Fall '22. In Fall '24, we were up 1.6% in headcount from Fall '23. In Fall '25, we were up 11% in headcount from Fall '24. We are

now above our Fall '19 headcount enrollment. A recent review of all our scholarship allocations has resulted in additional dollars being available to a wider number of students, which we believe helps us attract additional first year students. In the summer of 2024, the Michigan Legislature passed legislation creating the Michigan Community College Guarantee. This program will pay in-district tuition for all recent Michigan high school graduates. This program helped produce very strong August 2024 enrollment numbers. In the fall of 2025 SMC offered our own Green Light Guarantee. This College scholarship program pays the difference between the in-district tuition rate and the in-state tuition rate making the College tuition free for all recent graduates in the state. We believe these two scholarship programs are significant factors in our 11% increase in enrollment in Fall 2025.

We continue to work closely with the local school districts for dual enrollment of high school students and we anticipate that our continued participation in the Early Middle College programs of our local school districts will further position the College to attract and retain new students to our programs.

The College has implemented these initiatives along with others to attract, develop, retain and graduate students which we believe will allow the College to maintain and hopefully even experience a moderate increase in enrollment over the next five years. Our revised goal was to have our enrollment back up to at least 2100 students by the year 2025 which was somewhat aggressive, given the trends in the industry and our area, but we felt our multiple initiatives would position us well for achieving this goal. We are happy to report that our actual headcount for Fall 2025 was 2238 students, exceeding our 2100 goal.

b) Evaluate enrollment patterns over the last five years

Our enrollment over the past five years has been challenging. Unfortunately, the COVID 19 Pandemic hit us hard, as it did most community colleges across the state and nation, and we experienced a 14% decline in enrollment in Fall 2020. Our Fall 2021 enrollment did not rebound from the previous year's decline as we had anticipated but we held fairly even. Enrollment has been up in Fall 2022, Fall 2023, Fall 2024 and Fall 2025. The only time we've ever seen enrollment growth in four consecutive fall semesters over the past 30 years was during the recessions of 2007-10. Overall, our enrollment over the last 5 years has increased by 26% (Fall '25 to Fall '20) and has increased 4% since Fall '19. We developed a robust strategic plan for the years 2023 – 2026 which identified key factors to be addressed in order to put us on the path of our goal of modest enrollment growth over the next five years which we are proud to say is being effective. We believe our investment of resources into reestablishing athletics at SMC has helped with this recovery and will continue to help with modest growth in the next few years as well.

Two measures of our success as an institution are the number of students we serve, and the number of students who graduate from our programs. The number of students we serve directly affects revenues generated through tuition and fees, this measure should be of great interest to everyone in the College family. A number of enrollment reports are generated at Southwestern Michigan College each year to track this data. It is particularly useful to look at a 15-year history of enrollments to understand the state of the College today.

Table 2. IPEDS (Federal) Fall Enrollment Data

Year	% Full-Time	% Part-Time
Fall 2009	49%	51%

Year	% Full-Time	% Part-Time
Fall 2010	53%	47%
Fall 2011	50%	50%
Fall 2012	50%	50%
Fall 2013	50%	50%
Fall 2014	48%	52%
Fall 2015	48%	52%
Fall 2016	47%	53%
Fall 2017	44%	56%
Fall 2018	41%	59%
Fall 2019	43%	57%
Fall 2020	43%	57%
Fall 2021	41%	59%
Fall 2022	44%	56%
Fall 2023	49%	51%
Fall 2024	49%	51%
Fall 2025 (PRELIM)	50%	50%

As Table 2 above shows, over some of the past fifteen years there was a trend of the mix of full-time students to part-time students from about 50/50 to more heavily weighted to part-time. We believe this was a direct result of the improved economy during that time and the lack of outside funding (and need) for retraining the unemployed. But most recently it has shifted back to the 50/50 mix. Our re-entry into athletics, for which the students need to be full-time, contributed to this shift of a more equal full-time vs. part-time student ratio since '22.

Table 3 below details Student Credit Hours and Student Contact Hours for Southwestern Michigan College. While this chart shows some ups and downs during the cycle, we believe this was a factor of the previously mentioned downward trend nationally in high school graduates, as well as the positive national economic trend (prior to the current pandemic). Both of these outside factors affect enrollment in Community Colleges. However, as stated above, we continue to fight this trend with new recruiting and retention efforts and fiscal year 2022-2023 showed an increase of hours at SMC and we are experiencing another, bigger increase in fiscal year 2023-2024 and in fiscal year 2024-2025.

Table 3. ACS/MPDI Enrollment (State) Data

Year	Student Credit Hours	Student Contact Hours
2008-09	50,948	1,024,037
2009-10	63,255	1,256,650

2010-11	70,861	1,405,887
2011-12	62,455	1,247,587
2012-13	55,033	1,099,799
2013-14	57,015	1,137,791
2014-15	51,419	1,029,923
2015-16	47,118	922,063
2016-17	45,429	885,535
2017-18	46,409	867,719
2018-19	42,534	803,369
2019-20	42,740	830,467
2020-21	36,209	757,954
2021-22	34,879	719,555
2022-23	37,489	775,629
2023-24	41,052	842,344

Table 4 below details Southwestern Michigan Colleges unduplicated headcount totals for the past 20 years and full-time Equated Students (defined to be based on 30 credit hours and denoted by FYES).

Table 4. ACS Headcount and FYES Data

Year	Unduplicated Head Count	FYES
2009-10	4055	2040
2010-11	4316	2286
2011-12	3930	2015
2012-13	3387	1775
2013-14	3376	1839
2014-15	2983	1659
2015-16	2784	1520
2016-17	2680	1514
2017-18	2764	1550
2018-19	2519	1420
2019-20	2532	1427
2020-21	2200	1210
2021-22	2135	1165

2022-23	2174	1252
2023-24	2344	1372

d) Provide instruction staff/student and administrative staff/student ratios for major academic programs or colleges

We are very proud of our full-time faculty to student ratio of 1:30, a ratio that at least in the recent past is better than more than 50% of the other community colleges in the State of Michigan. Instructional staff/student ratios for major academic programs are as follows: Liberal Arts 1:17, School of Business 1:16, School of Technology 1:11 and School of Nursing 1:12. Southwestern Michigan College has a very lean administration with only 29 full-time employees being classified as executive, administrative or managerial. Any ratio calculation by academic program would be misleading and not of value.

e) Project future staffing needs based on five-year enrollment estimates and future programming changes;

With the fluctuations in enrollment through the last five years, we have been very diligent in right-sizing our staff in both the service and instructional areas. As programs have been added and deleted, we have made corrections in staffing to meet these needs. SMC first tries to assess the needs in the academic programs, making sure we have the right quantity, as well as quality, of instructors supporting the programs we offer. Our full-time faculty was reduced as enrollment slowed through the pandemic years but we continue to value the low full-time faculty to student ratio which we believe contributes to our high student success rates and have added a few full-time faculty positions back as enrollment is trending upward. We will continue to add or minimize as needed as the program offerings change over the next 5 years. On the administrative service side, we pay particular attention to re-thinking our service strategy in every department upon each and every turnover of staff, to be sure we are offering our students quality service effectively and efficiently. Over the past year, SMC has reallocated resources among administrative and academic departments to best meet the needs of our student enrollment changes.

As an educational institution, we are a service industry. Rather than manufacturing a product, we provide our customers with a variety of services. First, we market our services in an increasingly competitive marketplace. Second, we advise students and provide them with financial aid counseling. Third, we bill students and offer payment plans. Fourth, we provide instruction, instructional facilities, use of instructional equipment, and assessment. Fifth, we provide certification of accomplishments in terms of grades and degrees. Sixth, we provide placement services. Each one of these activities is very labor intensive. The following table shows the human resource allocation of Southwestern Michigan College.

Table 5. Fall 2024 Employees (Excluding Student Workers)

Employee Type (IPEDS SOC Code)	Full Time	Part Time
Postsecondary Teacher	45	95
Librarians	1	0
Library Technicians	0	2

Student and Academic Affairs and Other Educational Services	11	34
Management	21	0
Business & Financial Operations	5	0
Computer, Engineering and Science	13	2
Community Service, Legal, Arts & Media	24	0
Service	5	13
Sales and Related	2	0
Office & Administrative Support	6	3
Natural Resources, Construction & Maintenance	6	2
Total	139	151

Clearly, the vast majority of SMC's part-time employees each semester is the approximately 95 part-time faculty. Adjunct instruction allows us to provide an otherwise unimaginable breadth of offerings with only about 45 full-time faculty (for example it would take approximately seven full-time faculty to teach our English 103/104 sequence alone). Unlike many community colleges nationally who are increasing the number of courses taught by adjuncts in order to reduce cost, SMC still focuses on maintaining a high percentage of courses taught by full-time faculty. Excluding transfers in the operational budget of the College, SMC spends 63% of our operational budget each year on wages, salaries, and fringe benefits for our approximately 290 regular employees.

It is impossible to project our staffing needs in a vacuum. The College continues its initiative to provide instructional and advising support to our students and these needs continue to increase. We have two Teaching and Learning Centers at the College, one on each campus, that provide students with access to personal computers and tutoring staff, both in person and on-line. We have also been increasing academic and career advising to our students through a variety of programs. These areas of student support will continue to require adequate staffing going forward in order to attract, retain, develop, and graduate students. The continuation of services being offered remotely and/or online due to the pandemic will also be considered as we make staffing decisions going forward.

f) Existing class size and projected class size needs based on institution's mission and planned programmatic changes;

The College limits class sizes to a number small enough to allow maximum learning while large enough to meet restricted budgets. Composition classes, and similar cognitive learning experiences are limited to 26 students per section and Advanced Technology classes are often limited to 20 students due to availability of equipment. As a continuation of this adopted recommendation, classrooms are constructed with configurations limiting seating sizes suitable to learning environments. The expansion of the Nursing and Health Education Building allowed for an increase in students enrolled in the programs while

maintaining our desired class sizes. Even classes being offered online are limited to an appropriate size (22 students per section) to ensure quality instruction and access for the students by the instructors.

In addition, the College is always evaluating programs and eliminating those programs with low enrollment if deemed necessary. This allows the College to maximize its limited resources and to apply them to growth programs.

With our goal of increasing enrollment in the next few years, it will be necessary to have the classrooms and other instructional space in the Lyons Building updated and technologically upgraded to attract these students. Our strategic plan identifies Purposeful Academic Programs and Operational Efficiency – the renovation of the academic core of this building is critical in pursuing these strategies that we have identified as necessary for student success at SMC.

Facility Assessment

- a) *Professionally developed comprehensive facilities assessment is required. The assessment must identify and evaluate overall condition of capital facilities under college or university control. The description must include facility age, use patterns, and assessment of general physical condition;*

SMC commissioned Arkos Design to conduct a space utilization assessment of its academic and administrative facilities for the Facilities Master Plan project which was completed in July 2013. In December 2019, Abonmarche Consultants updated this Master Plan as we had accomplished all but one major project of the planned campus upgrades included in the original Plan. We are currently in discussions with another firm to commission a revised campus Master Plan to be completed in the upcoming year. Our facilities are always identified as one of our greatest strengths by staff and the community both. Over the past 15 years, we have made major improvements to all but one of our major campus buildings. The assessment of existing facilities is as follows:

Exhibit One

SOUTHWESTERN MICHIGAN COLLEGE

Professionally Developed Assessment of Existing Facilities

COMMENT BUILDING CONSTRUCTION	SQ. FT.	REPLACEMENT VALUE-NEW	DEPRECIATED VALUE
Briegel Building	45,882	\$14,943,300	\$11,207,500
O'Leary Building	21,698	9,300,600	8,370,500
Dale A. Lyons Building	76,285	30,003,700	16,502,000

COMMENT BUILDING CONSTRUCTION	SQ. FT.	REPLACEMENT VALUE-NEW	DEPRECIATED VALUE
Health Education	26,296	11,266,800	10,478,100
Daugherty Building	21,698	7,954,000	7,238,100
Charles O. Zollar Building	45,493	21,219,400	16,975,500
Instruction Resource Center Fred L. Mathews Library	33,500	12,127,400	8,246,600
McKenzie Hall	55,736	13,768,800	11,565,800
Barbara Wood Building	26,065	10,783,500	8,950,300
Jerdon Hall	55,736	13,768,800	10,565,800
Maintenance/Storage/Offices	11,820	1,506,100	1,024,100
Jan and A.C. Kairis Bldg.	26,129	6,487,300	5,514,200
Niles Area Campus	48,000	11,076,100	8,307,100
Bookstore & Gallery	14,612	6,391,000	4,793,200
Greenhouse	1,536	83,800	76,300
Athletic Storage	800	35,600	13,500
New Maintenance Storage	1,200	90,200	74,900
M-TEC	13,700	4,755,300	3,566,500

Jarvis Garage #2	768	31,400	19,200

COMMENT BUILDING CONSTRUCTION	SQ. FT.	REPLACEMENT VALUE-NEW	DEPRECIATED VALUE
TOTALS	592,620	\$190,522,200	\$147,129,900

b) Building and/or classroom utilization rates to industry standards

Southwestern Michigan College maintains classroom utilization data within the Office of Institutional Research. Institutional Research maintains comprehensive space utilization materials such that utilization is configured upon classroom size and seating capability for all College facilities.

Space utilization is only partially a matter of size and seating limits. In the modern high-tech environment, much space must be classified as "dedicated." For example, a welding laboratory/classroom cannot be used for other instructional programs. The same is true with automotive, electronic facilities, and certain computer laboratories such as those used in graphic design and computer aided design. On campus nursing labs are in maximum use and on those days when nursing students are in clinical situations off campus these labs are used for medical assisting, CNA, EMT, and other allied health students. Institutional Research then keeps space utilization records by room size, program usage, and instructional limits.

Incorporation of specific mandated facility standards for program Implementation where applicable (i.e. federal/industry standards for science research facilities, industrial machinery, agricultural and animal research, etc.)

Not applicable

c) Functionality of existing structures and space allocation to program areas served

Southwestern Michigan College maintains a philosophy of maximum use of all available space.

When programs, during program viability study or similar review, are demonstrated to have fewer students than space allocated, new modes of instruction are studied in an attempt to reallocate space needed by larger programs.

New construction always includes studies of space allocation based upon program need along with studies of use of space vacated. Additions to the Niles Area Campus included, for example, relocation of two entire technology programs from the Dowagiac campus to the Niles Campus. This decision was made because: (1) students enrolling in the program resided in that section of the college district, (2) employers hiring graduates are located in that section of the college district, (3) these programs had been housed in areas not specifically designed for them when built, and (4) higher quality instruction was made possible by the new facility. Still, part of the decision involved on-campus needs for vacated space. In addition, the M-TEC was reconfigured to accommodate the relocation of these programs from the Dowagiac campus to Niles. This allowed for the renovation of the previous Tech building into an IT center which now houses the College's School of Business, CIS courses, and the College's Office of Information Technology.

In 2016, we completed the re-purposing of two existing classroom buildings through a 2-stage process in which we renovated an old Academic Classroom building into a new Science and Allied Health Building, providing much needed state-of-the-art science labs, and then renovated the "old" science building into a refurbished Academic Building. These are examples of how SMC has adapted its facilities to the needs of our students. In 2017, we

began the planning for the renovation and expansion of our Nursing and Health Education Building, providing improved and expanded labs for our clinical nursing instruction. The project was completed as expected in December 2018 and classes were back in the new space in the Spring 2019 semester. The completion of this project provided us with the much needed additional and upgraded lab space for our students, as the availability of offsite clinical opportunities declines in the region.

- e) *Estimated replacement value of existing facilities (insured value of structure to the extent available)*

Exhibit One on pages 17 and 18, includes the estimated replacement value of existing facilities.

- f) *Assessment of campus utilities system (i.e. air distribution/heating and cooling system, water and sewage, electrical, etc.)*

SOUTHWESTERN MICHIGAN COLLEGE

Assessment of Campus Utility System

HVAC Systems – Systems for the following buildings have been included on the Maintenance and Repair/Deferred Maintenance Schedule and are identified as items needing attention in the next 3 – 5 years:

Library – (one of the three original buildings over 50 years ago)

Air Handling Unit and Chiller Unit..... \$ 230,000

Classroom (Briegel Building) – HVAC Office and Classrooms \$ 675,000

Bookstore – Chiller unit..... \$ 140,000

Niles M-Tec – Welding Labs Rooftop heating/air units \$ 350,000

Niles M-Tec – Office area air conditioner/makeup unit..... \$ 150,000

Dowagiac Campus - Utility Mapping\$ 67,000

Lyons Building - HVAC & Mechanical Systems \$3,850,000

Assessment of condition of campus infrastructure (i.e. roads, bridges, parking structures, lots, etc.)

All the parking lots on campus have been re-paved in the last ten years, including the \$550,000 capital investment in our Niles Area Campus parking lot in August of 2015. Included in our annual operating budget is an allowance of \$70,000 for preventative maintenance of our parking lots and sidewalks. Crack sealing and recoating of each parking lot is reviewed each year and maintenance provided on a scheduled rotation. We believe

that it is best to invest in the on-going maintenance of these facilities so as to maximize the useful life of the major re-construction we have invested in each parking lot area. However, full parking lot replacement may still be required on a rotating basis throughout campus beginning in the next five years.

- g) Adequacy of existing utilities and infrastructure systems to current and five – year projected programmatic needs.*

Electrical System – The Dowagiac electrical system is over 50 years old, with a few upgrades made over the last 15 years to only certain areas of the campus. Nine years ago we completed the much needed \$150,000 high voltage back feed loop on campus. Five years ago, the upgrading of the high voltage electrical feeds was completed for the last two buildings on campus. Six years ago, we completed the final phase of upgrading the fire alarm system to the Briegel Building which houses the College Administration offices, as well as additional classrooms. Five years ago, we replaced roofs and upgraded HVAC and ventilation systems in multiple areas throughout campus. Three years ago, we replaced the boilers in two of our main classroom and administration buildings on the Dowagiac campus, along with replacing cooling towers and upgrading the fire system at our Niles Area Campus. As mentioned earlier, we also self-funded a renovation of our gymnasium which included much needed ceiling repairs and installation of a new ADA compliant bleacher system.

- h) Does the institution have an enterprise-wide energy plan? What are its goals? Have energy audits been completed on all facilities, if not, what is the plan/timetable for completing such audits.*

Southwestern Michigan College had energy audits performed in 2007 and 2009 by the Retired Engineer Technical Assistance Program Assessment Team. In addition, the College had an energy audit performed by Ameresco in 2011. The goal of the College is to not only reduce operating expenses through energy efficiencies but also to use clean energy wherever possible. We have regularly replaced light fixtures throughout campus with new, higher energy efficient lighting, taking advantage of utility rebates offered as much as possible. Our Director of Facilities participated in a program with SEMCO four years ago to assess and address potential additional energy savings across campus.

SMC has invested significantly in new construction and renovation over the past 10 years increasing the value of our facilities by over \$27 Million since 2015. With every project the College has integrated energy efficiencies that have reduced the College's energy and maintenance cost of its facilities. This will continue to be a part of the design of all future renovation or new construction projects.

- i) Land owned by the institution, including determination of whether capacity exists for future development, or whether additional acquisitions need to occur to meet future needs.*

The Dowagiac campus of Southwestern Michigan College consists of 240 acres, of which approximately 100 acres are wooded. Eighty of these wooded acres were donated in 1975 by E. Claspy and has been maintained as a nature, hiking and cross-country running/skiing area. The entire 240-acre system is periodically reviewed by a forester to determine an inventory and recommended development. In 2014 the College acquired two pieces of property adjacent to the Dowagiac campus, adding a few more acres surrounding one of our main entrances to campus. In 2024 we acquired another adjacent property. We feel having control of these adjacent properties when possible is important for future planning considerations. One such property now houses our Director of Residence Life, providing essential on-site living accommodations for this position which improves availability of this person to the students.

The Southwestern Michigan College Foundation owns the 220 acre Edward Guse Farm in Dowagiac. This farmland was donated to the Foundation and is leased to generate scholarship revenue for SMC.

The current land space of the Dowagiac campus has been assessed for potential future growth for athletic, residential and student services facilities. Existing open land provides us the capacity for the addition of such facilities deemed necessary as we consider adding future sports and experience planned enrollment growth from this strategy.

The Niles Area Campus consists of 16 acres of which five acres remain open for building development.

- j) What portions of existing buildings, if any, are currently obligated to the State Building Authority and when these State Building Authority leases are set to expire.*

The Instructional Resource Center lease expires in 2034 and the Science and Allied Health Labs building lease will expire in August, 2051. Another SBA lease was signed for the renovated and expanded Nursing and Health Education Building and will expire in July, 2054.

Implementation Plan

- a) Prioritize major capital projects requested from the State, including a brief project description and estimated cost, in the format provided. (Adjust previously developed or prior year's figures utilizing industry standard CPI indexes where appropriate.)*

The College currently has two main capital project priorities. Those include the phased renovation of the 45-year-old Dale A. Lyons Building which houses our theater, art labs and gallery, and a significant number of classrooms and the expansion of our Student Activity Center to include a wrestling room for our growing wrestling team. As discussed above, Phase One of the Lyons renovation project (to be completed in summer 2026) has a projected cost of \$2.0 million and will include a renovation of the choir room, Phase Two (to be completed in summer 2027) has a projected cost of \$2.6 million and will include a renovation of the band rooms and Phase Three (to be completed in summer 2028) has a projected cost of \$1.7 million will include an update to the bathrooms, main hallway and theatre entryway. The renovation will enhance the College's capacity and ability to provide students with improved, quality instruction in many of the College's Associates in Arts offerings.

The other top priority for the College is the addition of Wrestling Room onto the Charles O. Zollar Building which houses our Student Activity Center and Gymnasium. This project is necessary to meet the needs of our expanding men's wrestling team and the addition of a women's wrestling team this academic year. The project began construction in the summer of 2025 and is expected to be completed in February 2026 for an anticipated cost of \$5.0 million. The project includes, a 11,000 square foot addition with a wrestling room, offices, restrooms and athlete changing rooms. The College's current wrestling room is located in the Dale Lyons Building. This project will relocate the wrestling room to the Zollar Building which houses the rest of the athletic facilities on campus and will free up space in the Lyons Building that will be converted into the choir room as part Phase I of the Lyons Building renovation.

(These projects are explained in more detail in the executive summary.)

- b) If applicable, provide an estimate relative to the institution's current deferred maintained backlog. Define the impact of addressing deferred maintenance and structural repairs, including programmatic impact, immediately versus over the next five years.*

The College understands that the condition of its facilities from a structural, aesthetic, and technology perspective is vital to maintaining the high level of student success that SMC students have achieved over the past decade. In addition, the campus and facilities of SMC is one of the strongest marketing tools that the College has. Therefore, SMC provides sufficient funds in both the General Fund and a Building and Site Fund to address any maintenance issues and does not have a significant maintenance back log – though there are always needs within a campus that is almost 60 years old.

Since 2015 the College has invested over \$27 million in new construction and renovation to meet changing program needs and to maintain our facilities. SMC will be continually assessing its facilities needs into the future in order to provide the best physical environment needed to foster student success.

Other than the HVAC system upgrades mentioned above, the College has the following list of roof replacements that will be needed in the next three to five years.

Zollar Building – Roof replacement \$270,000

Briegel Building – Roof replacement \$350,000

- c) Include status of "in-progress" projects financed with State Building Authority resources and incorporate how completion coincides with overall five-year plan.*

Not applicable

- d) Identify to the extent possible, a rate of return on planned expenditures. This could be expressed as operational "savings" that a planned capital expenditure would yield in future years.*

In the past ten years SMC has invested over \$27 million in renovations of existing buildings, the renovation of three major classroom buildings, and the renovation of the gym in the Student Activity center as well a 36 bed housing expansion project. With each renovation and new construction project, energy and cost saving technologies were included in the project plans as well as green technology where possible. This has substantially reduced SMC's energy and maintenance costs of its facilities.

In addition, SMC utilized reserves for the construction of the third residence hall which has provided a return on these funds of between 3% and 6% annually based on housing charges. We also believe the completed renovation of our three main classroom buildings in recent years makes our facilities attractive to students and thus helps us attract and retain students. The related tuition revenue provides for a good rate of return on these expenditures.

In 2025 we expanded residence hall capacity on campus. This project added new rooms and a total of 36 beds to the three existing residence halls on the Dowagiac campus. Expanding capacity was necessary to address growing housing demand. Construction began in the summer of 2024, and 24 rooms opened in January 2025, and the remaining 12 rooms were available for the fall of 2025. This project was being self-funded by the College and will provide additional housing revenue for years to come.

Another recent self-funded renovation of our Student Activity Center Gymnasium has provided us with a quality facility for attracting student athletes to SMC. Building a robust athletics program will help SMC and the College district in so many ways. First and foremost, it has contributed to our boost in enrollment by attracting high school graduates

who in the past have looked beyond SMC since we lacked intercollegiate athletics. This move maximized our occupancy rates in our modern residence halls, creating more evening and weekend activities for the campus community, and providing opportunities to involve other students beyond the athletes by showcasing activities from other program areas such as a pep band, and vocalists singing the National Anthem at home events. Athletics has re-energized our Sports Management major by providing numerous immersive experiences for students right here on campus and we hope it will develop a platform to potentially launch Physical Therapy, Sports Medicine, or other health degrees at SMC. More broadly, we believe athletics is drawing visitors to games, meets, tournaments, and summer camps to patronize local businesses throughout the year and is welcoming back hundreds of alumni who participated in these activities years ago. We believe for all of the above reasons, the rate of return on this initiative is significant to SMC.

- e) Where applicable, please consider viable alternatives such as distance learning, to new infrastructure development.*

Through SMC's strategic planning process the College is always looking at analyzing new platforms for delivering instruction. At the heart of this analysis is what platform of instruction is required by our students to be successful. This analysis is an on-going process for the College. Hybrid classes, as well as the flipped classroom concept are alternatives continually discussed as options for courses throughout campus. Decisions are made on the appropriate delivery for individual courses and programs based on the needs of the students to be successful. In the spring of 2020, we, along with many other institutions, were forced to offer remote instruction to accommodate our students through the national pandemic. As the pandemic persisted, SMC quickly shifted human and financial resources to train and prepare our faculty and staff for continued remote and on-line learning beyond one semester. We continue to assess each class offering and program to determine the best delivery method that will result in the best outcome for our students. We are looking at this both for the current environment and into the future for our students. This is at the core of our seven strategies for student success identified in our 3-year strategic plan. Distance learning/online programs are being considered in all programs but for our needs related to performing and visual arts, the hands-on piece of the education is not as effective in a distance education environment. We hope these classes employ more hybrid learning activities, but the core of the arts experience needs to be in the space we want to renovate.

While we have certainly made a move to more online class offerings, this is mostly for an expansion of enrollment for a specific population of students. In the fall of 2025 approximately 20% of our classes were online. In the summer semester online classes are even more popular with 67% of our Summer 2025 classes being online. We continue to believe that our strength is in providing students with a total college experience, which focuses on having students on our campus participating in classes and other activities in person. This is why we have decided to bring varsity athletics back to campus, requiring the athletes to live on campus.

- f) Identify a maintenance schedule for major items in excess of \$1,000,000 for fiscal year 2024 -fiscal year 2028*

The only maintenance item planned in excess of \$1,000,000, is the HVAC and mechanical systems in the Dale A. Lyons Academic Building. This was previously estimated to cost \$3,850,000. We are currently planning a phased approach to renovating this building and will address the HVAC replacement through that process.

- g.) Identify the amount of non-routine maintenance the institution has budgeted for in its current fiscal year and relevant sources of financing.*

In our FY26 budget we have budgeted a \$1.2 million transfer from our General Fund to our Building and Site Fund for non-routine maintenance or building projects. This includes \$800,000 for long-term capital projects, \$100,000 for emergency repairs and \$270,000 for a replacement roof for the Charles O. Zollar Building.
